## PROPOSED SOLUTION

### OUR SOLUTION — GOVINNOVATE

An AI-assisted Innovation-to-Procurement Platform that connects government departments with verified startups and takes successful innovations from problem identification to pilot, procurement and scale.

### SOLUTION WORKFLOW

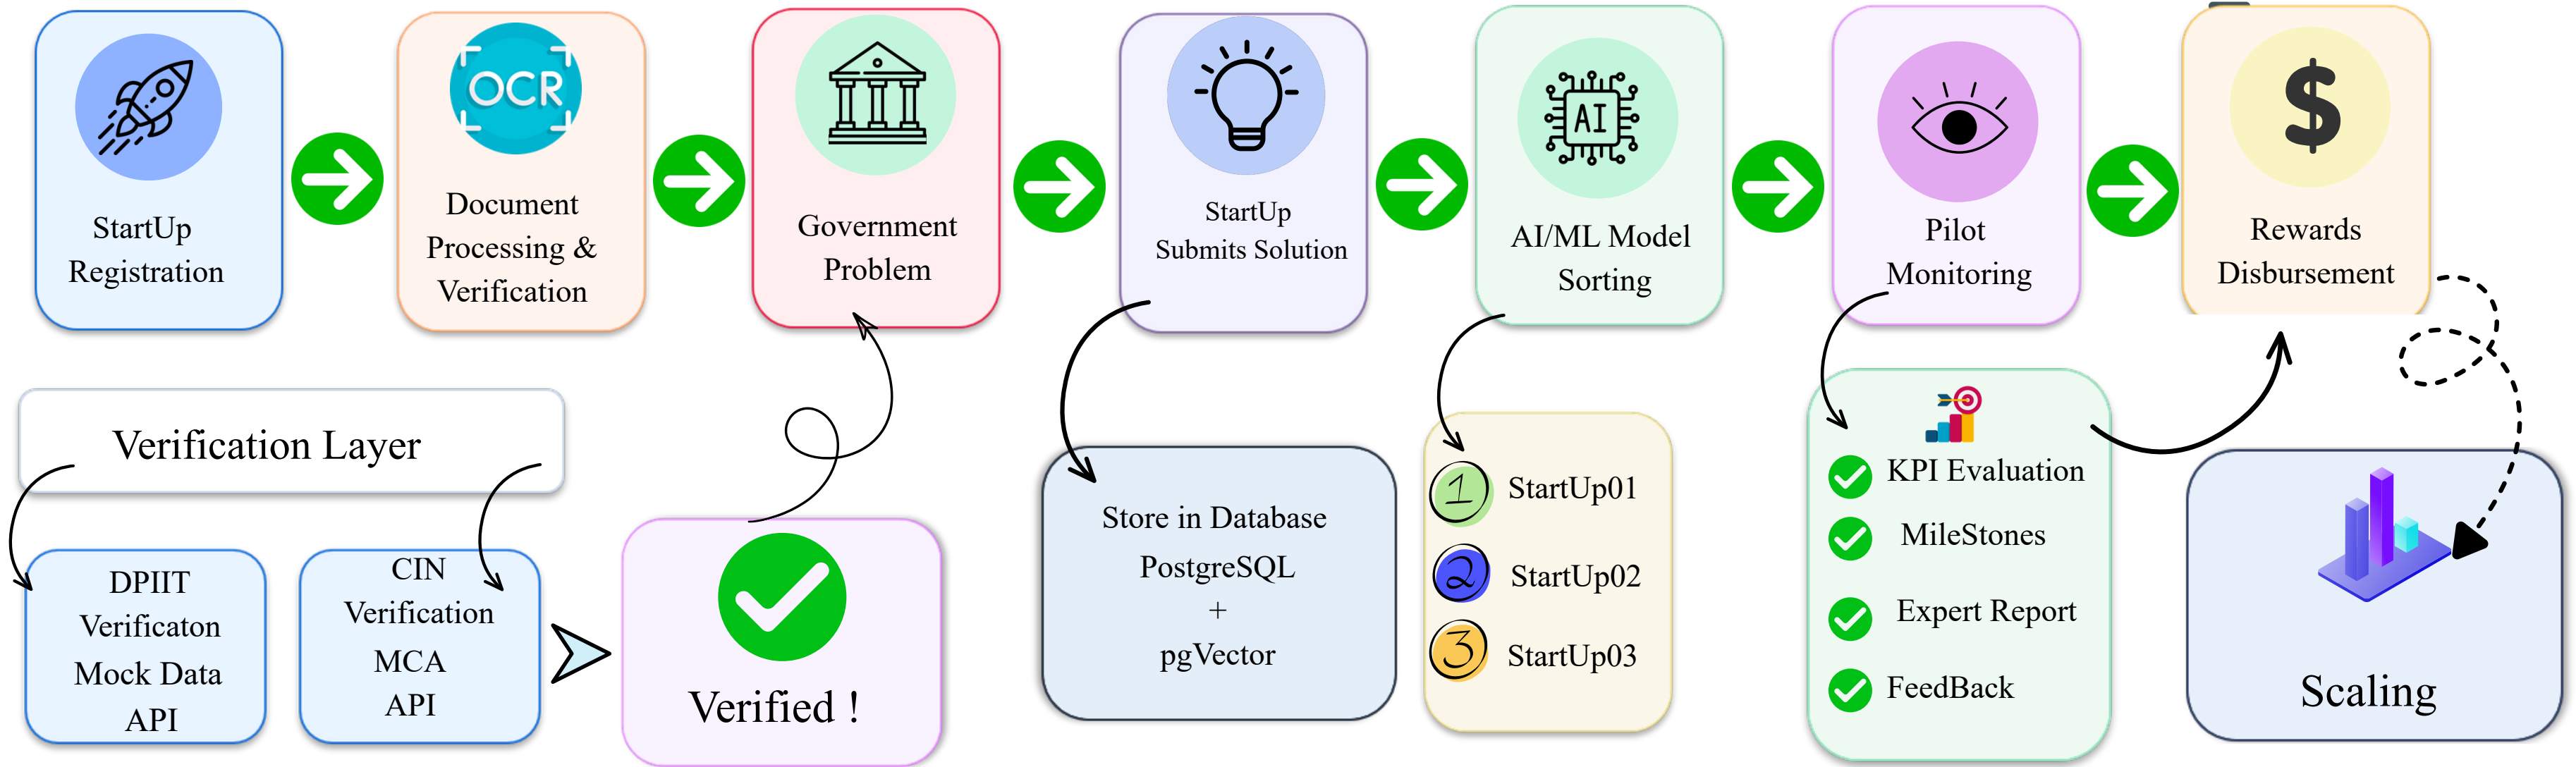

1. Define: Government creates a structured challenge
2. Discover and Match: AI/NLP finds relevant eligible startups
3. Verify: DPIIT, company & evidence verification
4. Evaluate: Independent expert technical assessment
5. Pilot: Controlled pilot with milestones & KPIs
6. Validate: Evidence + expert validation + user feedback
7. Procure: Government reviews and selects applicable procurement pathway
8. Scale: Successful solutions expand across departments/locations

### KEY INNOVATIONS

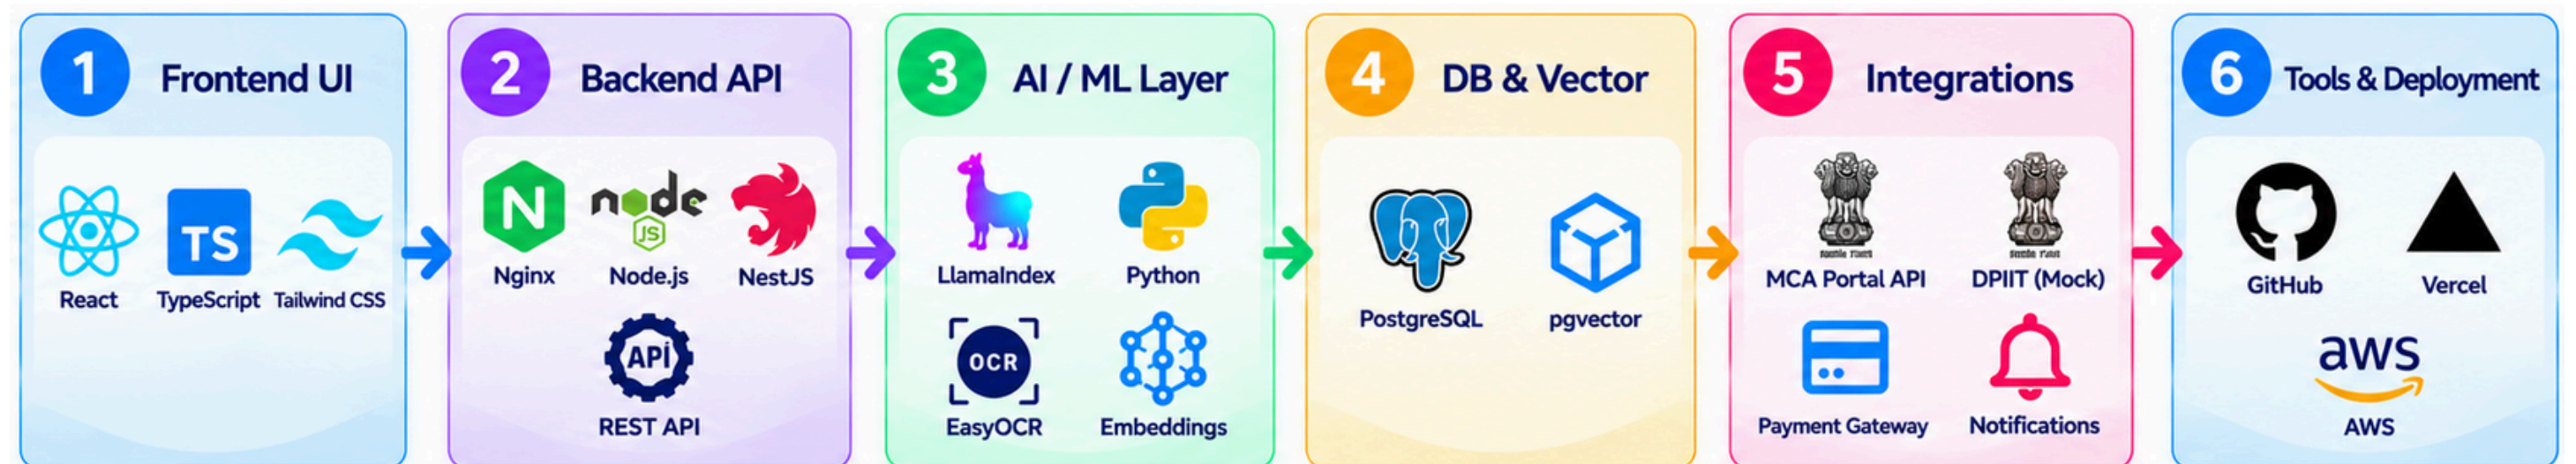

1. AI Problem-to-Startup Matching – Semantic matching based on problem, technology, sector and capability.
2. Evidence-First Verification – Structured verification of startup credentials, claims and supporting evidence.
3. Expert-in-the-Loop Evaluation – AI assists evaluation; domain experts validate technical evidence.
4. Pilot-to-Procurement Bridge – Connects validated pilot outcomes with the appropriate procurement pathway.
5. Milestone-Based Governance – Tracks KPIs, evidence, approvals and payment milestones throughout the pilot.
6. RAG Policy Assistant – Provides policy/procurement guidance grounded in approved documents

Technology Stack

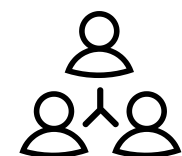

## FEASIBILITY

Can we build and implement it?

### Technically Feasible

Open-source and proven technologies: React/Typescript, Node.js, PostgreSQL + pgvector, LlamaIndex and Gemini APIs.

### Operationally Feasible

Clear roles for Government, Startups, Experts, Admin and Citizens with defined workflows.

### Data Feasible

Public documents, government challenge data and startup submissions can be securely stored with audit logs.

### Implementation Feasible

Modular, API-first and prototype-ready design enables phased development.

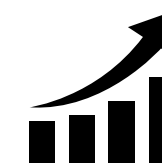

**We have what it takes.**  
**The building blocks exist.**

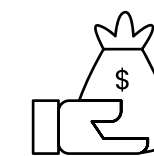

## VIABILITY

Can it be adopted, operated and scaled?

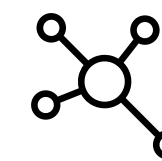

### High Adoption Potential

Solves real government problems and gives startups a clear path from pilot to procurement.

### Cost-Effective

Uses existing infrastructure and open-source tools to reduce development and operational costs.

### Scalable Model

Modular, cloud-ready and replicable across departments and states.

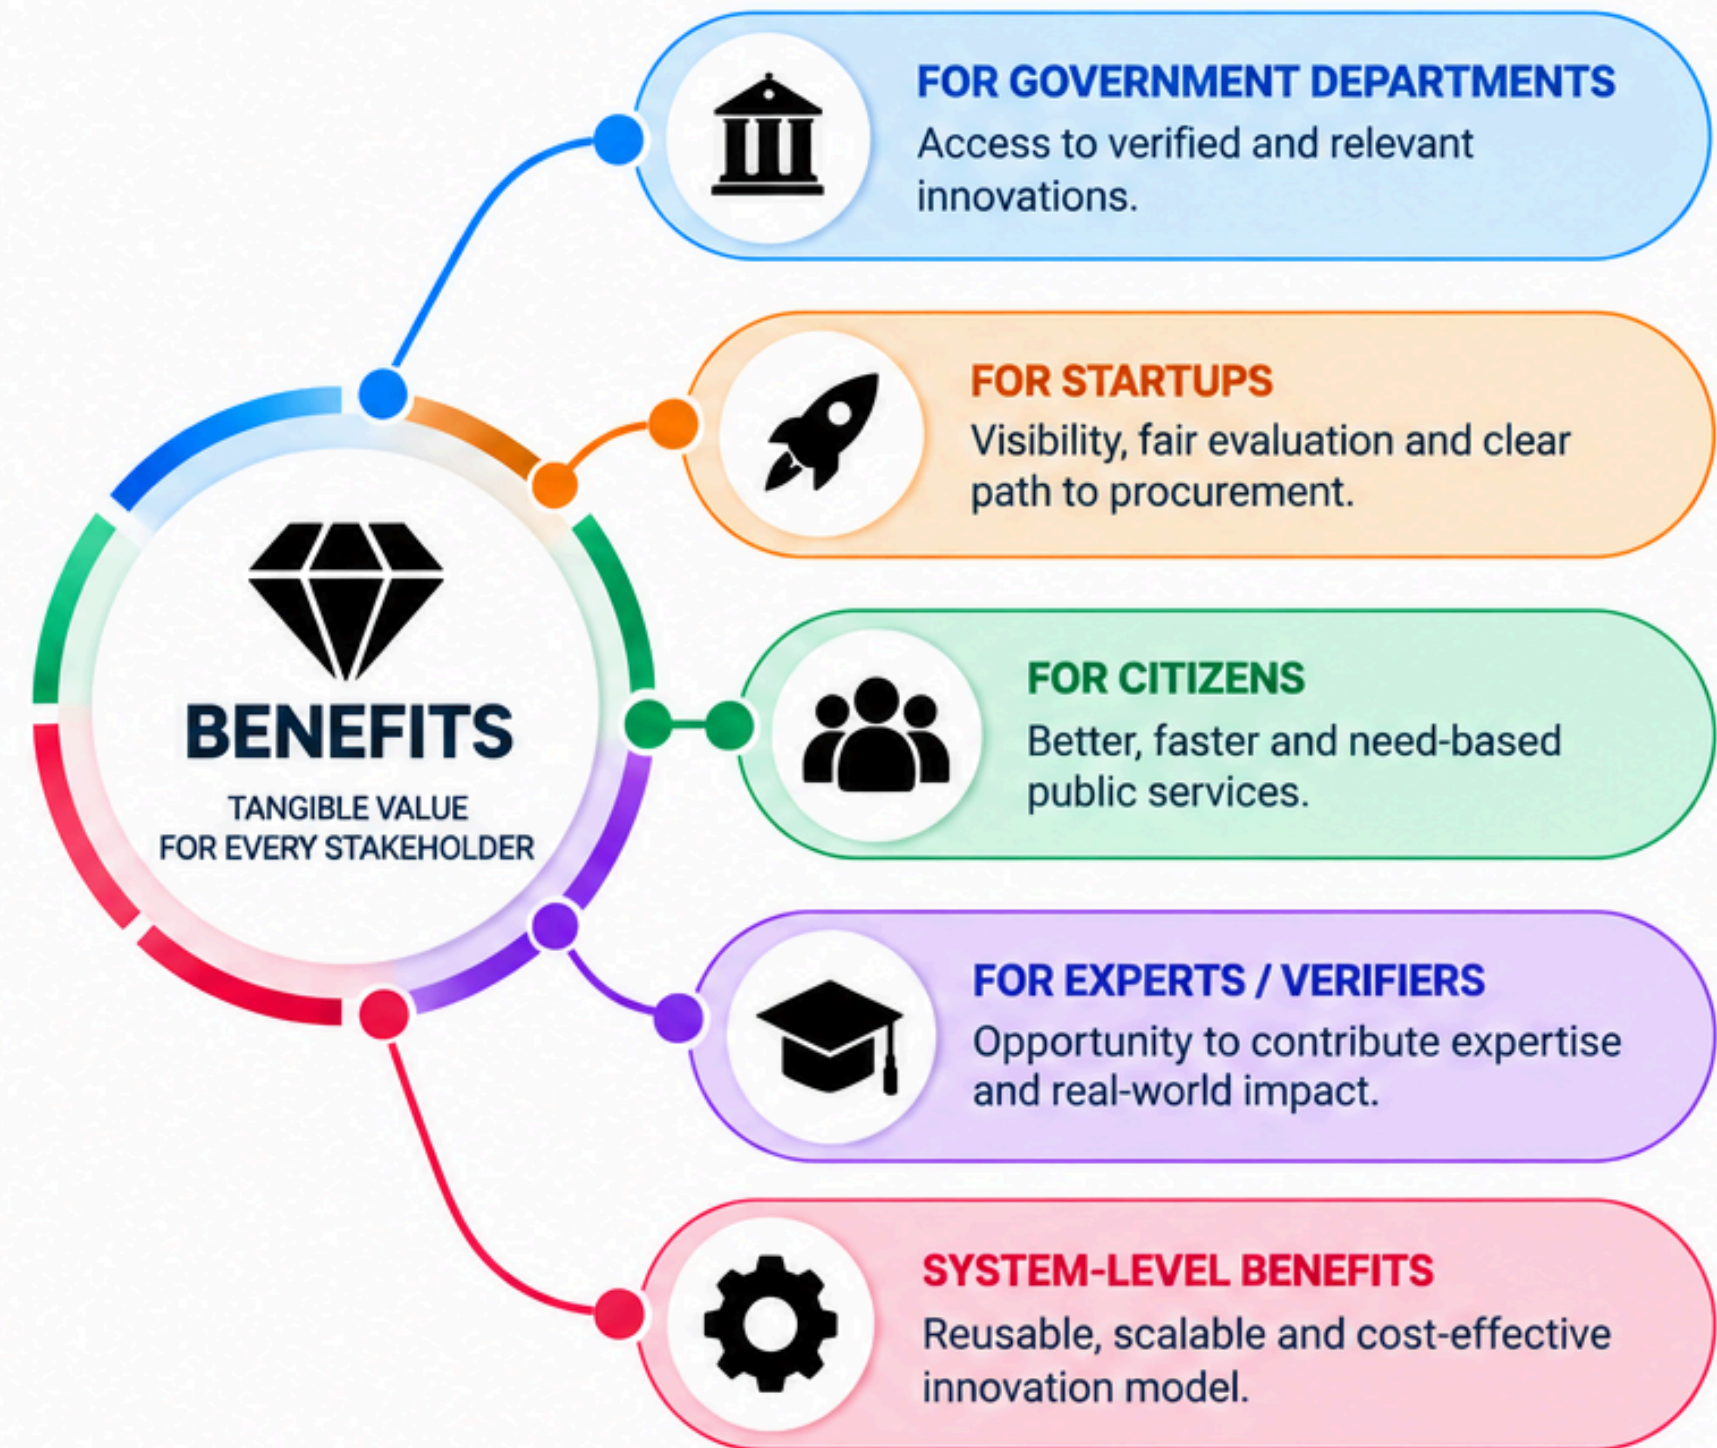

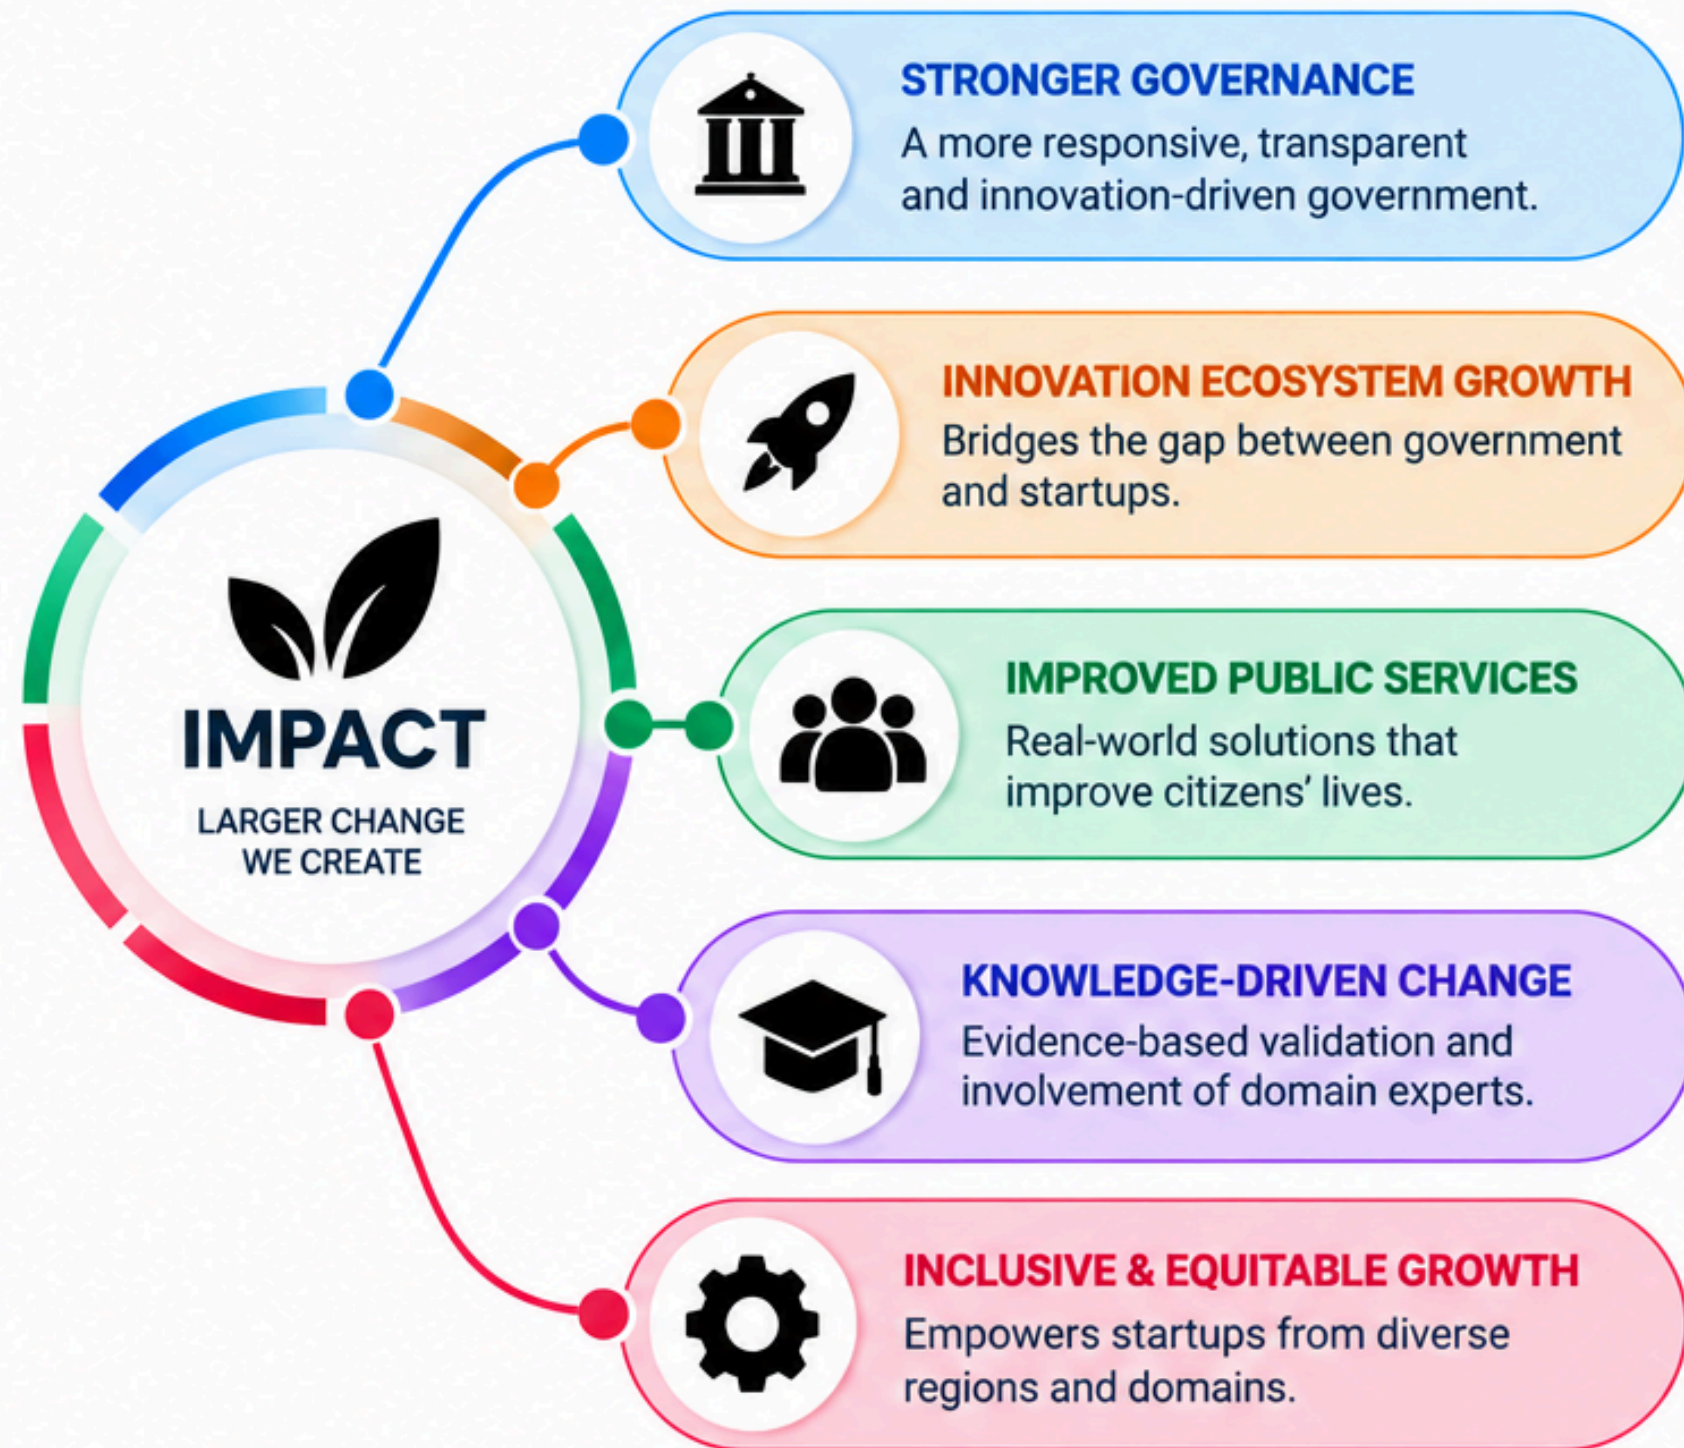

### Long-Term Value

Improves public service delivery and creates measurable social and economic impact.

**Not just possible.**  
**Built for long-term impact**
